Gyuri Lajos 13:32

Greetings. Learned a lot over the past 3 weeks or so.

https://indyhub.files.fission.name/p/viewer/web/viewer.html?file=https://bafybeicwxswjcvcix3gm575tdiduh4wkrdd54xjpjxzz54juzectjlnxzi.ipfs.w3s.link/17-Foss-Pfeiffer-Woldu-Williams-nn3sx_ocr_force.pdf 13:32

13:32

https://indyhub.files.fission.name/p/viewer/web/viewer.html?file=https://bafybeicwxswjcvcix3gm575tdiduh4wkrdd54xjpjxzz54juzectjlnxzi.ipfs.w3s.link/17-Foss-Pfeiffer-Woldu-Williams-nn3sx_ocr_force.pdf 13:33
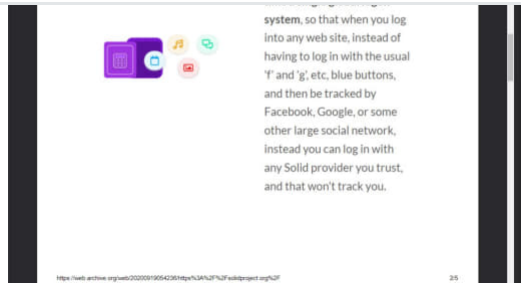

13:33

Both of these helped to do a thorough design review, and helped a lot. Would like to discuss this in relation to NAO, Greencheck and IndyNet. with special reference to the need for No Signon 13:37

Solid 3 years ago was running with the idea of a single global logon system, as you may be aware, but just like creating a gravatar to use everywhere it did not catch on derspite its obvious appeal, I joined ages ago of course. I think we need zero friction for all these thigs that may just work 13:39

13:40

When I read that 2 years ago I was thinking, can we do without any ever?   13:41

This is my latest attempt at formulating what I am trying to achieve perma-an-note // inspired to write   13:43

Complete the Web with

commons based
peer bootstrapped
constellations for
Evergreen
eventually global, nay interplanetary
Networked interpersonal Social Media
around which
interest/mission focused social networks can grow
connecting creators with their audiences, problemns with solutions, directly
weaving the Autonomous Open Mutual (l)earning Commons as a co-evolving engine for cultural co-evolution

very much inspired by this and   13:46
https://medium.com/@npfoss/so-you-want-to-leave-facebook-1ab3603f164a Gravity especially the discussion about scaling decentralized social networks

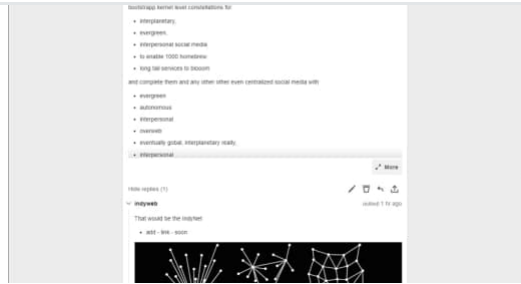

13:46

https://hypothes.is/a/zkvfJvlWEe2m5O_Ip0ooTA   13:53
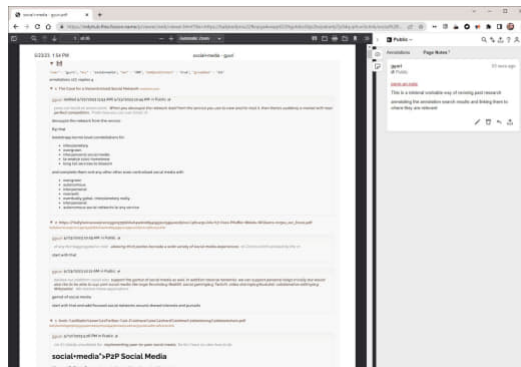

13:53

I did not realize until I've read the paper on decentralized social networks that I my focus was always on autonomous social media that would be merged with interpersonal social networks — 13:57

https://dev-indy0.fission.app/hyp/facet/aiframe.html?params=%7B%22user%22%3A%22indyweb%22%2C%22group%22%3A%22all%22%2C%22url%22%3A%22%22%2C%22wildcard_uri%22%3A%22%22%2C%22tag%22%3A%22%22%2C%22any%22%3A%22social%2Bmedia%22%2C%22max%22%3A%22200%22%2C%22service%22%3A%22https%3A%2F%2Fhypothes.is%22%2C%22exactTagSearch%22%3A%22true%22%2C%22expanded%22%3A%22true%22%2C%22addQuoteContext%22%3A%22true%22%2C%22format%22%3A%22html%22%2C%22_separate_replies%22%3A%22false%22%2C%22groupName%22%3A%22All%22%2C%22sortBy%22%3A%22recency%22%7D — 13:57

14:01

https://indyhub.files.fission.name/p/viewer/web/viewer.html?file=https://bafybeifpniu22fknjoja4veqip632l6gvb6ix34jo2bxjiebarbj7jz54q.ipfs.w3s.link/social%2Bmedia%20-%20gyuri.pdf

Back to the code face, which is still mainly specification. Not surprising because I move from emergency retro-refactoring to forward-factoring, deep refactoring, changing the names and structure in the light of the experiments and seeing it all in (inter)action — 14:04
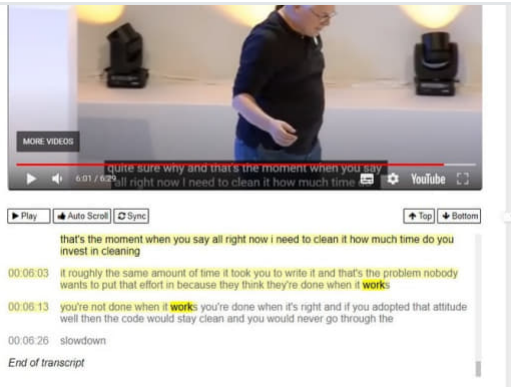

https://hypothes.is/a/wrHeYvhsEe20kwcOxqfaAA — 14:06

14:07

that's the moment when you say all right now i need to clean it how much time do you invest in cleaning

00:06:03 it roughly the same amount of time it took you to write it and that's the problem nobody wants to put that effort in because they think they're done when it **work**s

00:06:13 you're not done when it **work**s you're done when it's right and if you adopted that attitude well then the code would stay clean and you would never go through the

00:06:26 slowdown

End of transcript

not done when it works done when it is right
make it work then make it right

Gyuri Lajos   21:28

I should have sent you this, but it really requires an update. The annotations I am adding help me to gather the associative complexes that needs to be brought to mind as I work on a new updated synthesis

**Gyuri Lajos**   21:34

Hypothesis and its integration into IndyWeb is a real superpower

I've used Memex for a year, and I lost data, because I was not using it regularly at the time when the notifications came that localstorage wil lbe wiped out in an upcomming Chrome update.   21:38

Still I have my highest regard for the Memex people and if you haven';t come across with this, it is well worth watching https://twitter.com/MindDriveCo/status/1658003931140702214   21:38

This is the original lending page for TrailMarks from 7 years ago   21:40
https://trailmarks.co/

21:40

**Gyuri Lajos**   22:02

I even wrote my own chrome extension to do annotation and trailgraphing before trailmarks was conceived.

https://twitter.com/search?   22:02
q=mark%20in%20notation(from%3ATrailMarks%20OR%20from%3ATrailH
ub1)&src=typed_query&f=topto

22:05

Looked nice, even exciting, but what was missing is the ability to   22:06
create augmented authoring for the annotations, hence trailmarks

22:10

indynao

Even had a proto trailmarks notation driven project planner tracker in app widget that I used as part of Opidox project comprehension suite of capabilities   22:13

22:15

Back in the day I used prototrailmark notation in Google Docs and extracted mindgraph from there. Now I have my own little vanilla HTML editor to do that. Haven't used Google Docs for 4 years, never looked back   22:16
